Date: 9th May 2024

Digitization Projects – Scope

On 09th October, 2023, Aquila Asset Management Co.,Ltd (Aquila) and WIPO have agreed to the Digitization Proposal Project offering service by Aquila and work based office at DIP, MISTI, Cambodia.

This project contains two main tasks, Scanning and bookmark to PDF file of Patent documents and Data cleansing, with the scope of work 200,000 pages and 1807 applications

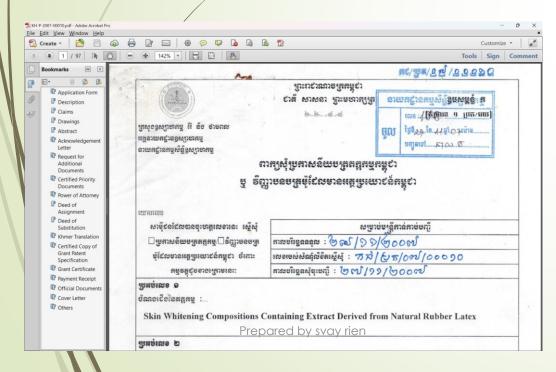

Digitization Projects – Scope

- Started Project On 26th October 2023
 Finished Project on 29th March 2024
 Result :
 - 1537Applications was digitized,
 total =187 601 pages
 - Bookmark 1537 applications
 - Data Cleansing 1807 applications

Benefits

- Hard Copy to Soft copy
- Uploaded to IPAS system
- Extract data to WIPO Publication
- Extract data to Website DIPR for publication
- Extract data to Cambodia Patent Design Data base
- Sharing to ASEAN IP REGISTER
- Sharing data to other IP Offices

launching Cambodia Patent Design Database and DIPR Website

The Cambodia Patent Design Database was launched on April 29, 2024 to enhance the intellectual property protection. Presided over by H.E. Hem Vanndy, Minister of Industry, Science, Technology & Innovation and WIPO.

CAMBODIA PATENT DESIGN DATABASE https://dip.misti.kh.wipo.net

This database is very useful for Researchers, Inventors , IP Agents, Applicants, Universities and Public sector to search the PATENT & DESIGN information

Lessons Learned

- Document finding
- Scanning Priority documents
- Bookmark (data issue: typo Error, space , comma.....ex ,)
- Data Cleansing (CN did not submit Inventor information sheet, SG grant Specification dose not have abstract, copy data from digitized document)
 - Capture data from scanning document to IPAS system

https://jsfiddle.net/kyawzaw/1atp6jkx

The present invention provides a prefabricated building cavity floor slab. The prefabricated building cavity floor slab includes columns, a main beam, a recycled beam, cavity nlate 5 components, floor slab upper flange plates and decorating seams, where recycled beam connecting gaps are reserved in transverse rib beam steel bar connecting parts of plate components; transverse rib beam steel bars are welded in the recycled beam connecting gaps on site to form the recycled beam; the recycled beam and longitudinal reinforced concrete rib beams form bidirectionally-stressed rib beams of the prefabricated building cavity floor slat o the cavity plate components consist of reinforced concrete rib beams, surface exposed steel bars hole forming components and lower flange plates; at least two decorating seams the bottom surface of the floor slab in a column grid of the prefabricated building slab; the decorating seams are intermittent and do not penetrate through the upper

THANK YOU
