

b.2.2.- Examples of retrieval errors due to wrong source data

The following examples detail the error messages you will receive in case, there was an issue in the request that was used to try to retrieve an already existing registration.

The screenshot shows a Postman collection structure. The main folder is 'd.2.2.- Examples of retrieval errors due to wrong source data'. It contains six sub-requests, each starting with 'POST':

- d.2.2.1.- getToken
- d.2.2.2.- Retrievals invalid operationCategory
- d.2.2.3.- Retrievals invalid documentKindCategory
- d.2.2.4.- Retrievals invalid documentNumber
- d.2.2.5.- Retrievals invalid documentDate
- d.2.2.6.- Retrievals invalid accessCode

These are the examples

Step	Action type	Postman request name	Notes
1	Generation of the authorization token	b.2.2.1.- getToken	normal token retrieval to allow the other test to execute
2	test with an invalid category in the (request) body	b.2.2.2.- Retrievals invalid operationCategory	
3	invalid document kind test	b.2.2.3.- Retrievals invalid documentKindCategory	
4	invalid or inexistent registered document number	b.2.2.4.- Retrievals invalid documentNumber	
5	Date is not valid(Invalid day)	b.2.2.5.- Retrievals invalid documentDate	
6	Access code not registered or invalid	b.2.2.6.- Retrievals invalid accessCode
